PRINTABLE CHART

Puppy and Kitten Vaccination and Deworming Schedule (India)

A clear, commonly followed schedule for core vaccines, rabies and deworming, with space to record dates. Your vet may adjust it for your pet.

By Dr. Vaishnavi Karmawat, B.V.Sc. & A.H., Veterinary Officer · vetvaishnavi.com

Puppy schedule

Age	Vaccine	Due date	Date given
6 to 8 weeks	Combination vaccine dose 1 (distemper, hepatitis, parvovirus, parainfluenza, often leptospirosis)		
9 to 12 weeks	Combination vaccine dose 2		
12 to 16 weeks	Combination vaccine dose 3 and rabies vaccine		
1 year after last puppy dose	Combination booster and rabies booster		
Every year after	Rabies booster; other boosters as your vet advises		

Kitten schedule

Age	Vaccine	Due date	Date given
6 to 8 weeks	FVRCP dose 1 (panleukopenia, calicivirus, herpesvirus)		
9 to 12 weeks	FVRCP dose 2		
12 to 16 weeks	FVRCP dose 3 and rabies vaccine		
1 year later	FVRCP and rabies boosters		
After that	Boosters every 1 to 3 years as your vet advises; rabies kept up to date

Deworming schedule (puppies and kittens)

Age	How often
2 weeks to 3 months	Every 2 weeks
3 to 6 months	Every month
Adults	Every 3 months, or as your vet advises

Keep your puppy safe until about 2 weeks after the last puppy vaccine: avoid streets, parks and unknown dogs, but keep socialising at home with healthy, vaccinated dogs.

Call a vet the same day if a young, not fully vaccinated pet has vomiting, bloody diarrhoea, refuses food or is very dull. These can be signs of parvovirus or panleukopenia.

Rabies safety for your family

If anyone is bitten or scratched by an unvaccinated or unknown animal, wash the wound with soap and running water for 15 minutes and see a doctor the same day.

This guide is general information for animal owners and farmers and does not replace an examination by a veterinarian. Vaccine schedules and scheme rules can differ by region and change over time; confirm with your vet, local veterinary hospital or official sources. Questions?
